AGT International Releases Innovative Integrated Security and Safety Solution, SafeGRID to the Energy Market

24. October 2013 · Comments Off · Categories: News · Tags: business, distribution, evolution, grid, pilot project

AGT International, a company revolutionizing public safety and security by connecting previously unlinked devices and data to make relevant information accessible and actionable for decision makers, has announced the commercial release of SafeGRID. AGT International's SafeGRID is an innovative solution which enables electrical transmission and distribution grids to become safer, more resilient and ensures business continuity.

This innovative solution was developed by AGT International while working with partner Emtele on a pilot project for electricity distribution company, Elenia. The project was located in Finland, a country at the leading edge of smart grid evolution.
